Professional Summary

Computer Science undergraduate with hands-on experience in DevOps, Cloud, and Linux system administration, including Kubernetes, Docker, CI/CD pipelines, and infrastructure monitoring. Practical exposure gained through academic projects involving containerization, orchestration, and observability, along with internship experience in server infrastructure management.

Education

Bachelor of Science in Computer Science (BSCS)

COMSATS University Islamabad, Vehari Campus

Completed 4 semesters | CGPA: 3.88 / 4.00

Expected Graduation: 2028

Currently Enrolled

Technical Skills

DevOps & CI/CD: Docker, Kubernetes, Jenkins, CI/CD

Cloud: AWS

Monitoring & Observability: Prometheus, Grafana

Linux & System Administration: Linux, Oracle Linux / RHEL, User and Group Management, Package Management (YUM, DNF, RPM), LVM, RAID, NFS, SSH/SCP, SELinux, Service and Process Management, Apache HTTP Server, Chrony

Infrastructure & Virtualization: iDRAC, RAID Configuration, VMware ESXi, VMware vCenter, VirtualBox, Bare-Metal Infrastructure

Automation & Configuration Management: Ansible

Programming Languages (Basic Knowledge): Python, Java, C++

Version Control: Git, GitHub

Projects

Kubernetes-Based Chat Application Deployment

Docker, Kubernetes

- Containerized a chat application using Docker for consistent and portable deployment.
- Deployed the application on Kubernetes, configuring pods and services for container orchestration.
- Managed the application deployment lifecycle using Kubernetes manifests.

Cloud-Native Streaming Platform Deployment

Docker, Kubernetes, AWS, Jenkins, Prometheus, Grafana

- Containerized a Netflix-inspired web application using Docker for portability and consistency across environments.
- Deployed the application on AWS infrastructure using Kubernetes for container orchestration.
- Automated the build and deployment pipeline using Jenkins to enable continuous integration and delivery.
- Implemented monitoring using Prometheus to track application and infrastructure metrics.
- Configured Grafana dashboards for real-time visualization of system performance and metrics.

AI Attendance System

YOLOv8, Computer Vision

- Developed an AI-based attendance system utilizing YOLOv8 for real-time object detection.
- Implemented computer vision techniques to detect and identify individuals for attendance marking.
- Processed image and video input for object detection and recognition tasks.

Professional Experience

Linooptek Innovations

July 2026 – Present

Cloud, Infrastructure & DevOps Intern / Technical Mentor

- Mentor students on Linux, system administration, infrastructure, and DevOps concepts through technical guidance and hands-on learning sessions.
- Configure and manage server environments using iDRAC, RAID, and bare-metal infrastructure for hands-on technical training.
- Provide hands-on guidance on AWS cloud services and mentor students in containerization and orchestration technologies, including Docker and Kubernetes.
- Guide students in automation and configuration management using Ansible, while assisting with infrastructure and DevOps-related troubleshooting.
- Support VMware virtualization environments, including VMware ESXi and vCenter, and help students understand virtualized infrastructure.
